The innovation “LOX CONS Heat Shield fiberglass insulation”

A New Safe and Eco-friendly Alternative

Produced from recycled glass fragments processed into glass fibers and reusing waste glass fibers from the production process. These are combined with a bio-based adhesive made from fructose, free from formaldehyde, to reduce long-term health impacts for users. The product meets the industrial product standard TIS 486-2527, has received the Green Label certification from the Thailand Environment Institute, and complies with international ASTM standards and building regulations.

“ Suitable for installation in residential homes, commercial buildings, and industrial factories. It helps keep homes cool, saves energy, and reduces noise disturbance. ”

The LOX CONS Heat Shield fiberglass insulation is one of the products resulting from a collaboration with our business partner, Microfiber Industries Company Limited This partnership aims to achieve balanced business growth through environmentally friendly products. It is projected that in 2024, the revenue share will grow by 1% from the LOX CONS product group.

Effective Waste Management
